

## Hidden Contacts User Guide v1.02

**Hidden Contacts** is a special phonebook application which allows you to hide and protect contacts from the phone built-in public **Contacts** list. The software provides also supplemental services for private use like automatically removing of the call or SMS logs as well as automatic locking of the Installer or the built in Messaging application.

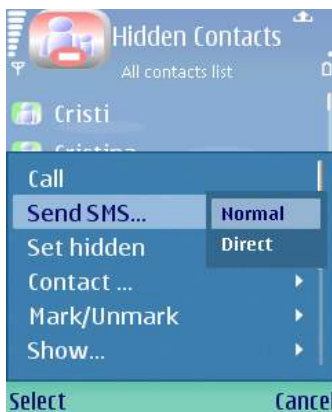

When started, the **Hidden Contacts** software will show you the contacts list currently defined in your phone. You can hide or make visible any contact from the list. If a contact is hidden it will not anymore appear in the phone built-in **Contacts** application. A hidden contact can only be accessed using the **Hidden Contacts** application. You must also enter a password to start the **Hidden Contacts** software in order to access the hidden/protected contacts.

### ❖ Options:

- **Call.** Allows you to place an outgoing voice call for the selected contact in the list.
- **Send SMS.** The **Normal** command allows you to send a SMS message to the hidden or public contacts using the default built-in messaging application. The SMS will be stored as normally in the **Sent** folder of the built-in **Messaging** application. To send a SMS to many contacts at once, mark them first using the **Mark** command. The **Direct** command will allow you to send a SMS directly to the contact you selected. The SMS message you sent **will not be stored in the Sent folder** and you can not view or edit it later. Note that in both cases, a SMS log entry will be stored in the phone's built in **Log** application.
- **Set hidden.** This command will hide the selected contact from the phone public **Contacts** list. If a contact is hidden it will not anymore appear in the phone built-in **Contacts** application but it will remain visible in the **Hidden Contacts** application list. You must enter the password in order to start the **Hidden Contacts** and access the hidden/protected contact.
- **Set visible.** Makes the contact visible in the phone built-in **Contact** application. (unhide)
- **Contact ...** Allows you to add a new contact and edit or delete the selected contact.
- **Show...** Switch the list to show only the hidden/protected contacts or all contacts (including hidden ones).
- **Mark/Unmark.** Allows you to mark/unmark contacts. Additionally, you can press the joystick right key to mark or unmark the contact or press the joystick left key to unmark all.
- **Change password:** Allows you to change the password. **The default password is 1234.** The password is asked when the **Hidden Contacts** software is started.

### ❖ Settings.

- **Show contact name.** The contacts list can be shown as First-Last or Last-First name.
- **Remove call logs.** Automatically removes the call logs for the contacts set with this option.
- **Remove SMS logs:** Automatically removes the SMS logs for the contacts set with this option. **Note:** the SMS messages sent or received are not deleted. If you wish to protect the SMS messages from unauthorized views you must lock the messaging application as described below.
- **Lock messaging app.** If set on **Yes**, the phone built-in **Messaging / SMS application** will automatically be locked by the **Hidden Contacts** service. You must enter the password in order to unlock and use the phone built-in **Messaging/SMS application** for reading or sending messages.

- **Lock Installer.** If set on **Yes**, the phone built-in **Installer** application will be locked. You must enter the password in order to unlock and use the phone's **Installer**. This can protect against unauthorized persons to install or uninstall software from phone, including the **Hidden Contacts** application.
- **Exit after.** The **Hidden Contacts** is automatically exited after the inactivity time set with this setting.

**Notes:**

 **Do not forget the password !**

 If the phone **Installer** is locked nobody can install or remove software from the phone. **You should not forget the password! There is not backdoor to recover the password.**
